Updated 56- Option on 80 Series Devices Feature Easier Installation

SARGENT recently updated the Electric Latch Retraction 56- option for 80 Series exit devices to improve installation. The motor-driven latch retraction device now features a redesigned controller module, allowing faster installation and a more intuitive configuration. Other features of this updated product are:

- Removable input harness, allowing greater wiring flexibility in the field
- Increased space for wire storage under the end cap
- Digital timer setting, easing adjustment and eliminating variation between openings
- Consolidation of separate timer potentiometer, adjustment tool, jumper, and toggle switch to a single DIP switch bank: giving it a cleaner look
- Full compatibility with existing installations and mechanical hardware
- Available for panic and fire exit hardware

The 56- is perfect for environments where fast, quiet electric latch retraction is needed on high traffic doors.

The enhancements to the 56- option are being implemented as a running change and will be phased into production beginning June 20, 2011. Pricing is not affected.

Please distribute this bulletin to everyone in your distributorship who specifies and/or purchases Exit Devices. Furthermore, insert this bulletin in the front of the 80 Series Exit Device section of your SARGENT full line catalog.
